

Module III Hands-on Challenge

1. Using the python Pandas library, load the dataset named `Raw_Sales_Data_Module_III.csv`
2. Print the first 10 rows of the loaded dataset
3. From your initial visualization of the dataset, are there any missing data points? If so, print the total number of missing values for each feature/row
4. Clean the dataset and handle any missing values.
5. Amazon has been curious what their regional sales has been for a period of time. As the Data Analyst for Amazon Inc, can you perform some exploratory analysis to help Amazon management realize the regional total sales?
